

Energy Encyclopaedia - September 14th, 2021 Energy Breakfast

Here are some links to energyeducation.ca, part of Dr. Jason Donev's comprehensive and stimulating presentation September 14th. The pages introduce topics and issues important for everyone to understand as we together decide how, and commit to addressing climate change.

- Who has [access to electricity](#)?
- Where does our [electricity come from](#)?
- What are [kinetic energy](#), [potential energy](#), and [energy](#) in general?
- What is [coal](#), and how is our use changing?
- What are our fossil fuel reserves like? They aren't what people [think!](#) (The real problem with fossil fuels is that we [aren't](#) running out!)
- There's a difference between renewable and sustainable, and that difference [is important](#).
- [Energy](#) use depends on where we live, and that's [changing](#) in big ways.
- [Population is growing](#) but unevenly and that has big consequences for us [using electricity as an energy currency](#).
